Dialock Hotel Locking System

A combination of convenience and security

The Product

Dialock Hotel is a touch-free identification and locking system. It replaces the combination of mechanical keys and locks completely and offers a significantly greater range of functions. Dialock is very flexible and can be extended at any time, from one to multiple users. The Dialock Hotel identification and locking system is made up of four basic components:

- Electronic keys
- Dialock door terminal - DTSH
- Dialock wall terminal - WT
- Encoding station

Conventional keys are replaced by electronic keys. The keys contain a memory chip on which user data and access authorisations can be stored.

Dialock Hotel can be installed as a basic version or as an Online version for larger projects. In the Online version, the central locking terminal is located in the main office with central shutdown option in case of any emergency.

The Features

Convenient for guests and staff - **Dialock Hotel** combines maximum convenience and security for all guests at minimum cost and effort to management. This is because access authorisations to the doors of your building can be conveniently granted and managed at the entrance. For each room, and also the main entrance, staff entrance, delivery entrances, lift and underground car park. Access authorisations are easy to program and can be flexibly adapted at any time.

- Convenient: Central administration of access authorisations for guests, employees and external staff.
- Secure: No unauthorised access is possible, since each key is unique.
- Economical: Investment pays for itself within a short time as granting locking authorisations is done in a flexible way.
- Low maintenance: battery operated
- Can be retrofitted: Any time at all existing doors
- Expandable: Additional components can be added at any time
- Open for multi-applications: Other product providers can be integrated (e.g. integration of time recording, canteen with cashless payment, multi-storey carpark etc.). A single key medium for wide variety of applications.
- Dialock also helps you save power: all circuits can be shut off when the room is unoccupied

Where to install Dialock Hotel

The use of Dialock does not end at the room door. All other doors can be integrated: the lockable room cabinet and furniture safe, the underground garage entrance and the lift.

Complex solutions are implemented with network partners and hotel software providers.

Door Terminal DTSH Tag-it™ ISO

- Consists of an inside module/outside module
- Material: Stainless steel
- Tag-it™ ISO 15693 technology
- Full Dialock compatibility
- "Do not disturb" function via thumbturn
- DIN Mounting

Tag-it™ Technology

Tag-it™ ISO is a new generation transponder technology in accordance with the globally recognised ISO Standard 15693 from Texas Instruments. Tag-it™ ISO is particularly outstanding due to its rapid signal processing and the availability of low cost data media.

Other Dialock Terminals

Dialock LockerLock

Dialock DFT Furniture Terminal

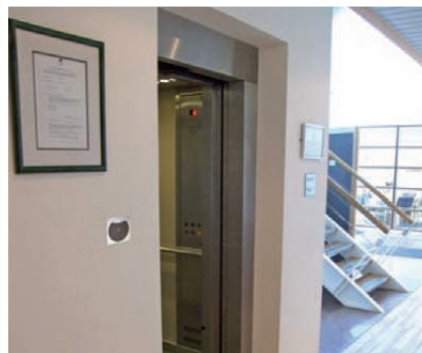

WT Wall Terminal

How Dialock Hotel works

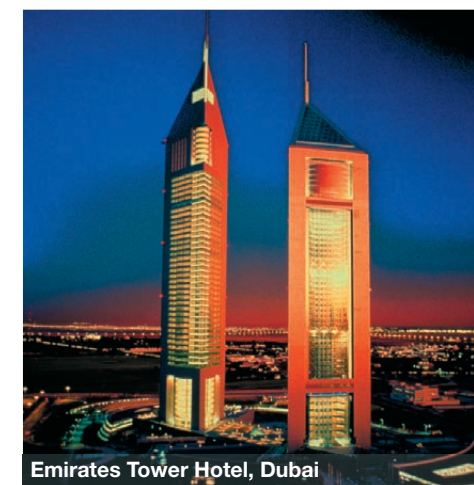

1. Hold programmed key close to door or wall terminal.
2. A signal will be sent to the terminal which unlocks the lock(s) it is authorised. Then open the door, cabinet door, safe etc.
3. Closing the door will automatically re-lock it.
